Darwin Nuñez Chavarría

Software Developer | Information Systems Engineering
Heredia, Costa Rica | (506) 8815-3029 | darwinn990@gmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Software Developer and Information Systems Engineering student (expected 2026) with 6 months of professional experience refactoring a production API and 1.5 years delivering a real-client web platform across the full software development lifecycle. Strong in Java, Python, PHP/Laravel, React, Docker, PostgreSQL/MySQL, Linux and cloud technologies (Azure, Google Cloud). Collaborative, detail-oriented and driven to build secure, scalable software with social impact in healthcare and education.

TECHNICAL SKILLS

Programming Languages: C, C++, C#, Python, PHP, Java, JavaScript, Kotlin, SQL (PL/SQL), Bash
Cloud & DevOps: Azure, Google Cloud, Docker, Docker Compose, Nginx, Cloudflare, Linux, Git
Cybersecurity: Nmap, Metasploit
Frameworks & Web: Laravel, React, Node.js, .NET, React Native, Jetpack Compose, REST APIs, microservices
Databases: PostgreSQL, MySQL, SQL Server
Tools: VS Code, Visual Studio, SQL Server Management Studio, Android Studio, Anaconda, debugging
Soft Skills: Team collaboration, problem-solving, communication, time management, adaptability, leadership

PROFESSIONAL EXPERIENCE

Software Developer – API Refactoring | *[Company Name]* Apr 2026 – Present

- Refactor a production API over 6 months on **Flameware**, the company's internal framework, standardizing code structure across endpoints to improve maintainability.
- Fix defects in legacy code during the migration while preserving existing API contracts, so current API consumers keep working without changes.
- Join code reviews and task planning with the development team, shipping refactored endpoints incrementally in an agile workflow.

Cycle Catalog – Catalog & Admin Panel (Real Client) | *PHP, Laravel, Blade, MySQL* 1.5 years

- Delivered a full-stack web application for a real client with 4 core modules: public product catalog, sales, invoicing and user management.
- Engineered the backend with **PHP and Laravel** (Blade) and tuned **MySQL** queries, giving non-technical administrators one dashboard to run daily operations.
- Managed the full **software development lifecycle** (requirements, design, implementation, testing, software deployment) in direct contact with the client, combining team collaboration and project management.

PROJECTS

BusGo – Real-Time Bus Tracking Platform | *Java, Docker, PostgreSQL, Microservices*

- Created a real-time bus route creation and tracking platform for 3 user roles (administrator, driver, passenger) through a web admin portal and a mobile app, using Java **microservices** (MVC) in **Docker** containers with a separate PostgreSQL schema per service.

Facial Recognition Access System | *Python, MySQL, Tkinter, Cryptography*

- Built a facial recognition application that logs real-time access to MySQL and encrypts sensitive data and usernames with Python's cryptography library, with a Tkinter interface.

EDUCATION

Universidad Nacional, Heredia, Costa Rica Expected 2026
Bachelor of Information Systems Engineering
Relevant Coursework: Data Structures, Database Design and Implementation, Database Administration, Operating Systems, Mobile Platforms Programming, Systems Engineering Project

LANGUAGES

Spanish (native) | English (B1 / intermediate – Conversational English course, 2020)
